

My name is Muhammad Shoaib Ubaid, and I live in Model Town Lahore. I am a graduate of BS Artificial Intelligence from Islamia University Bahawalpur. I have developed a strong foundation in AI, machine learning, and software development through both academic and practical experience. During my studies, I completed my final year project on Mango Leaf Disease Detection using a CNN model, which strengthened my skills in Python, TensorFlow, and computer vision.

Professionally, I have experience working as a Junior Business Developer at Cubit Byte Solution, where I handled client communication, lead generation, and business growth strategies. Alongside this, I have been actively working as a freelance graphic designer on platforms like Fiverr and Freelancer.com, where I specialize in creating book covers, social media designs, and AI-powered product visuals. Now I am learning to build AI chatbot projects.
